Subject : Science	Year : 6	Term : Autumn						
		-X-	M.					
<ul> <li>Vocabulary</li> <li>Define the word and include etymology if useful.</li> <li>Voltage - Electricity can only flow when a power supply is able to "push" the electrons around a complete circuit. The size of the push is called the voltage. The higher the voltage, the bigger the push moving the electrons around the circuit.</li> <li>Components - objects that can be added to an electrical circuit. E.g. bulb, battery, switch, buzzer, motor.</li> <li>Cells - An electrical cell is a device used to generate electricity, or to make chemical reactions by applying electricity.</li> <li>Battery - A battery is one or more cells, connected.</li> <li>Brightness - the quality or state of giving out or reflecting light.</li> <li>Volume - quantity or power of sound; degree of loudness.</li> <li>Switch - a device for making and breaking the connection in an electric circuit.</li> <li>Buzzer - an electrical device that makes a buzzing noise and is used for signalling.</li> <li>Bulb - an object that emits light.</li> <li>Motor - a machine that supplies motive power for a vehicle or for another device with moving parts.</li> </ul>	Knowledge What children will knowLearningTeachingAssessmentRememberingTellingTestingHow to use recognised symbols when representing a simple circuit in a diagram.TestingAs the number and voltage of cells in a circuit increases so does the brightness of a bulb or the volume of a buzzer.	UnderstandingWhat children will understandLearningTeachingAssessmentPractisingCoachingObservingAdding extra components to a circuit makes the function of each component vary – e.g. bulbs will get dimmer, buzzers will get quieter, motors will reduce in speed. This happens because in a circuit, energy is shared between the components is increased, the less energy there is for each component.Increasing the number of and the voltage of cells in a circuit increases the energy in the circuit – this makes bulbs shine brighter, motors spin faster, and buzzers increase in volume.	Skills         What children will be able to do         Learning       Teaching       Assessment         Reflecting       Facilitating       Evaluating         Draw circuits using the recognised symbols.       Evaluating         Construct simple series circuits.       Use their knowledge of simple circuits to create useful circuits e.g. making traffic lights.         Working Scientifically       Report and present findings from enquiries, including conclusions, causal relationships and explanations of and degree of trust in results, in oral and written forms such as displays and other presentations					

## Orton Wistow Primary School – Curriculum Plan

Subject : Science – Evolution and Inheritance

Year : 6

Term : Autumn

			M.
Vocabulary	Knowledge	Understanding	Skills
<ul> <li>Fossils – the remains or impression of a prehistoric plant or animal imbedded in rock.</li> <li>Inhabited – when a person, animal or group live in or occupy a place or environment.</li> <li>Offspring – a person or animals' child or children.</li> <li>Environment – the surroundings or conditions in which a person, plant or animal lives or operates.</li> <li>Adaption – the process of change by which an organism or species becomes better suited to it's environments.</li> <li>Evolution – the process by which different kinds of living organism are believed to have developed from earlier forms during the history of the earth. From the Latin evolvere – which means unrolling.</li> <li>Characteristics – a feature or quality belonging typically to a person, place or thing that helps to identify them.</li> <li>Breeds – a stock of animals within a species having a distinctive appearance and typically developed by deliberate selection.</li> </ul>	Recognise that living things have changed over time and that fossils provide information about living things that inhabited the Earth millions of years ago. Identify how animals and plants are adapted to suit their environment in different ways and that adaptation may lead to evolution. Know ideas about evolution where developed by Charles Darwin and Alfred Wallace and palaeontologists such as Mary Anning.	Recognise that living things produce offspring of the same kind, but normally offspring vary and are not identical to their parents for example considering different breeds of dogs and what happens when for example a Labrador is crossed with a poodle. Understand how variation in offspring over time can make animals more or less able to survive in particular environments – e.g. exploring how a giraffes' neck got longer, or the development of insulating fur on the arctic fox.	Use classification keys to sort and organise organisms into different categories. Use classification keys to identify different living things. Working Scientifically Report and present findings from enquiries, including conclusions, causal relationships and explanations of and degree of trust in results, in oral and written forms such as displays and other presentations Identify scientific evidence that has been used to support or refute ideas or arguments.
